2012
KURARAY NORITAKE DENTAL INC. WAS FORMED

CLOSE TO YOUR NEEDS THROUGHOUT EUROPE
Symposia, Technical Trainings, manuals, IFU's, How-To-Use videos, color selection solutions, specialized appointed trainers throughout the European continent, a rich and vast academic network, papers originated from research in vitro and in vivo.

SHAPING THE FUTURE OF ESTHETICS
- Innovator of next generation dental products
- Inventor of adhesive monomer MDP
- Adhesive first-rate standard: CLEARFIL™ and PANAVIA™
- World's first multi-layered zirconia: KATANA™

RESEARCH & DEVELOPMENT
Dental Innovation track record of 40 years. More than 70 patents assigned since 2010.

KURARAY
NORITAKE
DENTAL SUPPLY

BASIC RESEARCH
- Adhesion technology to tooth substrate
- Color reproduction technology

APPLIED RESEARCH
- Fluoride releasing technology
- Fine ceramics design technology (porcelain/zirconia)
- CAD/CAM technology

TAKING RESPONSIBILITY
Our processes are continuously improved for reducing impact on the environment.

A high standard of Quality control on all our production

ISO13485
Kuraray Noritake Dental Inc. is an affiliate of KURARAY CO., LTD., developing dental materials.

- Surface treatment technology for fine filler
- Fine ceramics production technology
- Production and quality control
- Easy-to-use powder production technology
- Dispersion and mixing technology of fine filler
- CAD/CAM advancement
- Non-metal alternative materials

The business unit develops dental & medical materials.

- The business unit develops dental & medical materials
- 3 strategic bases covering Europe, America and China
- 1 HQ in Japan

Complimentary product families that restore teeth to a near natural state:

**Chairside**
- Bonding: CLEARFIL™
- Cement: PANAVIA™
- Composite Resin: CLEARFIL MAJESTY™

**Laborside**
- Porcelain: CERABIEN™ ZR (CZR)
- SUPER PORCELAIN EX-3
- Zirconia: KATANA™

Kuraray Noritake Dental Inc. was formed represented in more than 90 countries worldwide.

- Represented in more than 90 countries worldwide
- 17 countries in Europe

- Innovator of next generation dental products
- Inventor of adhesive monomer MDP
- Adhesive first-rate standard: CLEARFIL™ and PANAVIA™
- World’s first multi-layered zirconia: KATANA™

Shaping the future of esthetics
KURARAY NORITAKE EUROPE

On a mission to create less complex dental procedures delivering natural beauty and lasting results.

MILESTONES IN DENTISTRY

The great achievements that changed dentistry in the past 40 years all started within Kuraray, Japan.

- CLEARFIL™ BOND SYSTEM F: 1978
- PANAVIA™: 1983
- CLEARFIL™ SE BOND: 2000
- PANAVIA™ F 2.0: 2003
- CLEARFIL™ MAJESTY™ ES-2: 2012
- CLEARFIL™ DC CORE PLUS: 2013
- CARIES DETECTOR: 1978
- CLEARFIL™ PHOTO CORE: 1983
- CLEARFIL™ AP-X: 2000
RESEARCH & DEVELOPMENT
Kuraray began to develop dental products in the 1970s. Today we are recognized as an innovator in the research and development of dental products that simplify everyday dental procedures while delivering first-class, lasting results.

MDP
Back in 1981 we invented MDP, the adhesive monomer which achieves a durable bonding with enamel, dentin, metal and metal oxides.

EVIDENCE BASED
All our product developments are based on empirical support. And we try to go further, classifying evidence by only the strongest proof coming from clinical cases, practice based research and randomized controlled trials.
HIGH TECH
Kuraray Inc., our mother, develops highly innovative products for many more fields of business besides dentistry. The portfolio ranges from synthetic plastics to fine chemicals and technology used for high-tech processes and finishing.

CRAFTSMANSHIP
Kuraray Noritake ensures that the many global dental talents can be consistent in their work by delivering a high standard of quality for our full product range.
CORE TECHNOLOGY OF KURARAY

MDP MONOMER

DESCRIPTION

After Kuraray introduced the first adhesive monomer in dental history by inventing the phosphate monomer Phenyl-P in 1976, its molecular structure was improved in 1981 by creating a molecule with greater adhesive capability to the tooth structure and an affinity for metal. The result of this development work was the MDP monomer (10-Methacryloyloxydecyl dihydrogen phosphate), which convinced users by its special monomer structure: This phosphate monomer was extremely effective for enamel, dentin and on metal alloys. Consequently, PANAVIA™, including the MDP monomer, was introduced as a high-performance adhesive resin cement for the cementation to tooth structure and to metals. The impressive success of PANAVIA™ encouraged Kuraray to integrate the MDP monomer into other bonding systems as well as to obtain a high degree of adhesion to tooth substrate from the formation of a chemical bonding.

LSci

DESCRIPTION

The unique LCSi monomer creates a strong chemical bond to Porcelain, Lithium Disilicate and Composite Resin. This unique silane has a long hydrocarbon spacer (the hydrocarbon chain between the silanol group and the methacrylate group) which makes it more hydrophobic and stable than the small γ-MPS molecule. The reaction with the silica particles in the glass-based materials is expected to be also more orderly and faster. The result is a more optimally bonded surface with a greater resistance to hydrolysis.

RAPID BOND TECHNOLOGY

Rapid bond technology which combines MDP Monomer with new hydrophilic amide monomers has been introduced to CLEARFIL™ Universal Bond Quick. The new hydrophilic amide monomers are able to penetrate into the wet dentin rapidly and MDP creates a strong chemical bond to hydroxyapatite. This special combination works together to deliver optimal stability and resistance to moisture for a lasting result.
**MDPB MONOMER**

**ANTIBACTERIAL EFFECTS OF THE MDPB MONOMER**

The primer of CLEARFIL™ SE PROTECT has antibacterial effects against bacteria by direct contact. This is possible thanks to the integrated functional MDPB monomer. The question “How does that work?” can be answered relatively easily: The pyridinium group as a component of the MDPB monomer (12-Methacryloyloxydodecyl pyridinium bromide) is positively charged. The cell structures of bacteria are generally negatively charged, which is why they are automatically attracted by the positively charged contact points of the MDPB monomer. They then lose their electrical balance, destroying the cell membrane of the bacteria. The bacteria are killed by this process, which is also known as bacteriolysis.

**CERTIFIED BIOCOMPATIBILITY**

The MDPB monomer is immobilized by the polymerization of the bonding layer. There it remains latently active without affecting the patient’s own cells. The strength of the adhesive is not negatively affected by this process, patented by Kuraray, as is the case when chlorhexidine or other such cavity hygiene products are used. Moreover, it ensures that cytotoxic effects on the patient’s own body cells such as odontoblasts are excluded long-term as well. These test results have been confirmed by the official biological safety test ISO 10993-1.
SELF-ETCH TECHNOLOGY

TOTAL-ETCH VS. SELF-ETCH
THE ADHESIVE TECHNOLOGY – CORNERSTONE OF MODERN, MINIMALLY INVASIVE DENTISTRY.

In 1978, Prof. T. Fusayama from the Tokyo Medical and Dental University was confronted with a technical problem. He had the idea of permanently filling cavities with resin materials as an esthetic alternative to amalgam. But in contrast to hydrophilic tooth hard structure, the composites displayed hydrophobic properties and were not capable of establishing a close bond. To get around this problem, he developed a new technique for dentin conditioning which would provide a surface suitable for the use of an adhesive. Going against the philosophy of the times, he etched both enamel and dentin with phosphoric acid. This preparation of the dentin removed the smear layer which appeared after the preparation, opened the dentin tubuli, and created the conditions for use of the following primer-adhesive system. In cooperation with the company Kuraray – at that time an industrial manufacturer of innovative special resin materials – the first total-etch bonding including an adhesive phosphate monomer for enamel and dentin, CLEARFIL™ BOND SYSTEM-F, was developed. While this system rapidly gained acceptance in Japan, dentin phosphoric acid etching was the subject of controversial discussions at the international level for a long time. It was not until the middle of the 1980s that it gained worldwide acceptance and has since been one of the standard procedures for multi-step adhesives.

The advantages of this technique are self-evident and have been confirmed over the course of time by numerous scientific studies. Besides the removal of the smear layer, there is a demineralization of the intertubular and peritubular dentin. Hydroxylapatite crystals from the collagen network are released and individual fibers are exposed. They are then coated by the hydrophilic monomers of the adhesive and permanently anchor themselves in the exposed network during the polymerization. Increased technique sensitivity of the total-etch system led to the development of the self-etching technique. Although these systems produce good results when used correctly, total-etch multi-step adhesives were regarded as highly technique-sensitive in Japan due to the precision required for the work steps and times: excessive etching removed more minerals from the dentin than desired and exposed the collagen fibers to a depth which was greater than the following adhesive could penetrate. Excessive drying caused the exposed collagen fiber network to collapse and blocked the access of the adhesive to the dentin areas below. This led to lower adhesive strength, simultaneously sensitivities and biting pain.

The selection of the volatile solvent in the bonding systems also influenced the moisture of the dentin surface required for ideal results:
Since alcohol is lighter than water, alcohol-based systems require a dry surface, which means that there is a high risk of overdrying. Acetone-based adhesives, on the other hand, work best on a slightly moist surface because acetone is drawn into the tubuli through a moist surface. But since the definition of “slightly moist” is difficult to realize during actual work, the bonding results are worsened if the surface is either too dry or too moist.

Enamel surface after acid etch treatment with phosphoric acid (37%)
"CLEARFIL™ LINER BOND 2" was introduced by Kuraray at the beginning of the 1990s as the first self-etching adhesive. The objective was to eliminate the technique sensitivities caused by the total-etch technique and to develop a system which required fewer work steps, achieved permanently reproducible results, and at the same time could prevent sensitivities and biting pain for the patient. A water-based, self-etching primer was developed to avoid problems related to a separate etching technique or a defined surface moisture. This primer conditioned enamel and dentin in much the same way as phosphoric acid, but was not as aggressive and could be buffered in its effect by released calcium.

The slightly acidic pH was thus reduced further and raised to a neutral level, which allowed the primer to stay in the cavity. This made it possible to avoid complicated work steps such as rinsing, drying, changing cotton rolls as well as the risks of excessive etching and overdrying. The following adhesive without any volatile solvents could now penetrate the dentin, closing the dentin tubule and contributing after the polymerization to prevention of post-operative sensitivity. The development of the MDP adhesive monomer has improved further the chemical bond properties of the self-etching Kuraray adhesive. The TEM images show that the collagen fibrils in the thin hybrid layers have not completely lost the hydroxyapatite, in contrast to the total-etch technique. The remaining hydroxyapatite directly bonds chemically with phosphate groups of Kuraray’s own MDP monomer. (TEM Image 1)

A similar effect can also be observed in the enamel. Although the enamel structure is only slightly affected, no fissure formation is determined between the adhesive, composite, and enamel. Although the adhesive strength without prior enamel etching was questioned when this technique was first introduced, various studies worldwide have since proven the equality of the MDP-based self-etching systems.

Due to the company’s lead in research in the field of adhesive and resin technology, Kuraray Noritake Dental’s products achieve outstanding rankings in clinical in-vivo and in-vitro examinations. “REALITY”, an independent American test institute, certified that CLEARFIL™ SE BOND caused absolutely no postoperative complaints (Issue 118, February 2000).

1) After curing, the cured adhesive should be covered by a composite (e.g. CLEARFIL MAJESTY™ ES Flow).
2) With CLEARFIL™ DC Activator (not necessary for combination use with CLEARFIL™ DC CORE PLUS or PANAVIA™ SA Cement Universal).
3) With CLEARFIL™ DC Activator.
4) Combination use with CLEARFIL™ DC CORE PLUS only.
5) Self-curing properties.
6) With CLEARFIL™ SA PRIMER
CLEARFIL™ Universal Bond Quick

NO WAITING, NO EXTENSIVE RUBBING, NO MULTIPLE LAYERS

The innovative new universal bonding that works instantly ensuring a consistent and lasting result for all restorative procedures - in one simple quick step. Just apply and proceed.

Unlike traditional bonding agents that require waiting time, extensive rubbing and multiple layers in order to deliver an optimum result, CLEARFIL™ Universal Bond Quick delivers the same consistent, predictable results every time. It does not only save the dentist valuable time, it eliminates risk of error with the result that all restorative procedures are carried out to the same exceptionally high standards. The product reliably bonds all direct restorations, core build-ups and even indirect restorations and repairs. Use it the way you want: self-etch, selective-etch or total-etch. But whichever way, CLEARFIL™ Universal Bond Quick delivers the same uniform results without the need to wait.
INDICATIONS

- Direct restorations using light-cured composite resin
- Cavity sealing as a pretreatment for indirect restorations
- Treatment of exposed root surfaces
- Treatment of hypersensitive teeth
- Intraoral repairs of fractured restorations
- Post cementation and core build-ups
- Cementation of indirect restorations

BENEFITS

- Procedural freedom
- Wide indication range
- Thin film thickness
- Rapid bond technology
- Predictable results
- High bond strength

PRODUCT RANGE

#3571-EU
Bottle Standard Kit
Content: 1 Bottle (5 ml), K-ETCHANT Syringe (3 ml), Applicator Brush (x 50 pcs), Needle Tip (x 20 pcs), Mixing Dish, Light Blocking Plate

#3574-EU
Bottle Value Pack
Content: 3 bottles (5 ml)

Content: CLEARFIL™ DC CORE PLUS (White or Dentin): 1 syringe (9 ml); CLEARFIL™ Universal Bond Quick: 1 bottle (1 ml);
Accessories: 20 Mixing tips, 10 guide tips (L), 10 guide tips (S), 50 applicator brushes (endo), 1 dispensing dish, 1 light blocking plate
CLEARFIL™ SE BOND

CLEARFIL™ SE BOND is a light-curing bonding system consisting of a self-etching primer and a bonding agent. The water-based primer enables the simultaneous treatment of enamel and dentin in one step. The patented MDP monomer helps to eliminate post-operative sensitivities. Direct skin contact with the contents of the bottles is avoided by the practical “Intelly Case”. The necessity to open the individual bottles has been eliminated, avoiding the risks of skin allergies. Moreover, the system prevents waste.
INDICATIONS

- Direct filling restorations using light-cured composite or comonomer
- Cavity sealing as a pretreatment for indirect restorations
- Treatment of hypersensitive and/or exposed root surfaces
- Intraroral repairs of fractured facing crowns made of ceramic, hybrid ceramic or composite resin using light-curing composite
- Surface treatment of prosthetic appliances made of ceramic, hybrid ceramic and cured composite

BENEFITS

- Improved marginal sealing from extremely high bond strength
- Water-based, mild self-etching primer
- Tried and proven 2-step self-etching bonding system
- No technique sensitivity
- Prevents post-operative sensitivities
- Known as the “Gold Standard” of the self-etching adhesive systems

CLEARFIL™ SE BOND 2

THE GOLD STANDARD MADE FUTURE PROOF

A two-step self-etch universal adhesive.

With CLEARFIL™ SE BOND 2, you can bond various core build-up and (in)direct restorations. Only use the self-etch primer with the bond to create your direct restorations. For bonding indirect and core build-up restorations, you just mix it with our CLEARFIL™ DC Activator. Thanks to its photo initiators, it shows about 21% higher dentin bond strength compared to gold standard CLEARFIL™ SE BOND.

Curious about how this is possible? It’s all about the right mix of Kuraray Noritake Dental’s proven MDP and Curing technologies to give you long-lasting results. And that’s not it. The unit doses let you enjoy this self-etch adhesive even more.
**INDICATIONS**

- Direct filling restorations using light-cured composite or compomer
- Cavity sealing as a pretreatment for indirect restorations
- Treatment of hypersensitive and/or exposed root surfaces
- Intraoral repairs of fractured facing crowns made of ceramic, hybrid ceramic or composite resin using light-curing composite
- Surface treatment of prosthetic appliances made of ceramic, hybrid ceramic and cured composite

**BENEFITS**

- Improved marginal sealing from extremely high bond strength
- Water-based, mild self-etching primer
- Tried and proven 2-step self-etching bonding system
- No technique sensitivity
- Prevents post-operative sensitivities
- Known as the “Gold Standard” of the self-etching adhesive systems

**PRODUCT RANGE**

- **CLEARFIL™ SE BOND 2 Kit**
  Content: Bond (5ml), Primer (6ml), 100 applicator brushes (fine), 1 mixing dish, 1 light blocking plate, 1 outer case

- **CLEARFIL™ SE BOND 2 Unit Dose Standard Pack**
  Content: 50 tips (0.1ml/tip), each for Bond and Primer, 100 applicator brushes (fine)

- **CLEARFIL™ SE BOND 2 Bottle Value Pack**
  Content: 3 Bond (5ml/bottle), 3 Primer (6ml/bottle)

- **CLEARFIL MAJESTY™ ES Flow (color selection)**
  1 syringe: 2.7 g/1.5 ml

**PRODUCT RECOMMENDATIONS**
CLEARFIL™ S³ BOND PLUS
(CLEARFIL™ tri-S bond plus)

Are you looking for a one-step adhesive that ensures “Speed – Simplicity – Strength”?

Then CLEARFIL™ S³ BOND PLUS, Kuraray Noritake Dental’s time-saving adhesive for fast and simple application, is the ideal solution for you.

Thanks to its short application time and very simple procedure compared with other recent one-step products CLEARFIL™ S³ BOND PLUS allows a high error tolerance while creating excellent bond strength to enamel and dentin.

Furthermore CLEARFIL™ S³ BOND PLUS ensures a stable interface between tooth and composite resin due to Kuraray Noritake Dental’s new high performance initiator for light-curing, the original adhesive monomer MDP Molecular Dispersion Technology.

CLEARFIL™ S³ BOND PLUS – it’s your choice for a fast and easy bond!
INDICATIONS

- Direct restorations using light-cured composite resin
- Cavity sealing as a pretreatment for indirect restorations
- Treatment of exposed root surfaces
- Post cementation and core build-ups using dual-cured composite resin CLEARFIL™ DC CORE PLUS
- Intraoral repairs of fractured restorations made of ceramics, hybrid ceramics or composite resins
- Core build-ups using light-cured composite resin
- Surface treatment of prosthetic restorations made of ceramics, hybrid ceramics or composite resin
- Surface treatment of dental posts

BENEFITS

- Quick and time-saving with only one single application step: no shaking, no mixing, no rubbing, no multiple application
- Easy to use for optimal results
- Stable performance thanks to Kuraray’s adhesive monomer MDP, proven since more than 35 years!
- New high performance initiator for light-curing leading to an increased polymerization ratio
- Fluoride-releasing property for a reinforcement of the adhesive-dentin interface
- Precise and economic dosing

CLEARFIL™ LINER BOND 2V

CLEARFIL™ Liner Bond 2V enables the processing of all light-curing and chemically curing composites as well as amalgamates.

The bonding system comprises a self-etching two-component primer and a two-component bonding agent. The mild self-etching bonding system forms a high quality hybrid layer. Yet it achieves optimal adhesion and at the same time prevents post-operative sensitivities.

During the commonly used etching procedure, the exposed collagen network collapses. This is one of the major problems in conventional total-etch bonding systems because it results in a decreased bond strength. In contrast to this, CLEARFIL™ Liner Bond 2V is biocompatible with respect to the tooth tissue. Thanks to the mild etching and decalcification effect of the primer as well as its natural water content, the collagen fiber network retains its natural form and volume. These properties of CLEARFIL™ Liner Bond 2V guarantee successful adhesion of both the tooth and the restoration.
INDICATIONS

- Direct filling restorations using light-curing or chemically curing composite
- Treatment of hypersensitive and/or exposed root surfaces
- Cavity sealing as a pre-treatment for indirect restorations
- Intraradial repairs of fractured ceramic facing crowns using light-curing composite
- Cementing inlays and onlays made of ceramic (or composite) using composite resin cement

BENEFITS

- Proven 2-step self-etching bonding system
- Suitable for light-curing, self-curing and dual-curing composites
- High adhesive properties to enamel and dentin
- Water-based, mild self-etching
- Prevents post-operative sensitivities

CLEARFIL™ SE Protect

With the new and versatile CLEARFIL™ SE Protect this antibacterial adhesive is made future proof. It’s the next version of the world’s first self-etching adhesive with a reliable antibacterial effect. Thanks to the unique anti-bacterial monomer MDPB, CLEARFIL™ SE Protect exhibits an “Antibacterial Cavity Cleansing Effect”.

CLEARFIL™ SE Protect is now a self-etch universal adhesive. Just use the self-etch primer with the bond to create your direct restorations. For bonding indirect and core build-up restorations you just mix it with our all-new CLEARFIL™ DC Activator. Curious about how this is possible? It’s all about the right mix of Kuraray Noritake Dental’s proven MDP and antibacterial MDPB technologies to give you long-lasting results.
**INDICATIONS**

- Direct restorations using light-cured composite resin or compomer
- Cavity sealing as a pre-treatment for indirect restorations
- Treatment of hypersensitive and/or exposed root surfaces
- Introral repairs of fractured crowns/bridges made of porcelain, hybrid ceramics or composite resin with light-cured composite resin
- Surface treatment of prosthetic restorations made of porcelain, hybrid ceramics and cured composite resin
- Core build-ups using light- or dual-curing composite resin
- Cavity sealing under amalgam restorations

**BENEFITS**

- Virtually no post-operative sensitivity
- The primer contains antibacterial monomer (MDPB)
- Tried and proven 2-step self-etching bonding system
- Fast and simple use
- High bond strength to enamel and dentin
- Antibacterial cleansing effect
- Fluoride release

**PRODUCT RANGE**

#2870-EU
Kit
Content: 1 Primer: 6 ml, 1 Bond: 5 ml, 50 x 2 Disposable brush tips (white), 1 Brush tip handle (white), 1 Brush tip handle (black), 1 Mixing dish, 1 Light blocking plate, 1 Outer case

CLEARFIL™ PHOTO BOND

CLEARFIL™ Photo Bond is a dual-curing adhesive for enamel and dentin based on the total-etch technique. The product has been developed for use with light-curing and dual-curing restoration materials. In addition, direct adhesion to ceramics can be achieved by mixing with CLEARFIL™ Porcelain Bond Activator.
BENEFITS

- High bond strength to tooth enamel and dentin
- Both light-curing and self-curing
- Simple procedure
- Economical use

PANAVIA™ V5

One cement, all indications, predictable procedure. That is PANAVIA™ V5. PANAVIA™ V5 is our strongest cement ever developed. And with five shades, our most aesthetic one too. This makes a totally new kind of dentistry possible, where you can be confident during cementation.

Prime the tooth. Roughen and prime the prosthetic. Apply your cement. That’s it. There is no better way to durably cement your crown, single-wing cantilever bridge, core build-up and veneer. And if you work in a lab? Then you can be sure it’s the most reliable way to cement your implant abutments too. See, with just one prime procedure you cover all cement indications. And your patients? They will surely be impressed by the beautiful results of your prosthetic treatment.

www.panaviaV5guide.eu
INDICATIONS

- Cementation of crowns, bridges, inlays and onlays
- Cementation of veneers
- Cementation of adhesion bridges and splints
- Cementation of prosthetic restorations on implant abutments and frames
- Cementation of posts and cores
- Amalgam bonding

BENEFITS

- Covering all cement indications including adhesion bridges and veneers
- Automix application
- Available in five beautiful shades
- Easy application
- Low film thickness
- Easy clean-up of excess cement
- Improved Endo tip for easier root canal access
- Reliable marginal sealing
- High bond strength
- High mechanical stability
- Fluoride releasing
- Color stable

PANAVIA™ SA Cement Universal

PANAVIA™ SA Cement Universal is a forerunner in self-adhesive resin cements containing the unique LCSi monomer that adheres to virtually every material including glass ceramics without the need for a separate primer. Using a unique silane coupling agent built into the paste - LCSi monomer - the cement delivers a strong, durable chemical bond to porcelain, lithium disilicate and composite resin. The original MDP monomer present in the paste too, allows for chemical reactivity with zirconia, dentin and enamel.

PANAVIA™ SA Cement Universal offers wide range of indications for adhesion and is suitable for crowns/bridges, inlays/onlays, posts, and even adhesion bridges. Thanks to its powerful single-step bonding formula, cementation is easier than ever before. The product is available in both automix and handmix options.
INDICATIONS

- Cementation of crowns, bridges, inlays and onlays
- Cementation of prosthetic restorations on implant abutments and frames
- Cementation of adhesion bridges and splints
- Cementation of posts and cores
- Amalgam bonding

BENEFITS

- Wide indication coverage including adhesion bridges and lithium disilicate
- Easy storage at room temperature*
- Easy application with little pressure
- Improved Endo tip for easier root canal application
- Automix and Handmix delivery

* Below 25°C despite the presence of silane(LCSi)

PANAVIA™ F 2.0 SINCE 2003

PANAVIA™ F 2.0 is a universal resin cement which shows high bond strength to tooth structures, metals and ceramics. PANAVIA™ F 2.0 has been regarded as a guarantee for permanent adhesive technique in the areas of all-ceramics and metal restorations. It is recommended by leading universities as a premium product. The self-etching cement system prevents post-operative sensitivities and provides consistently good results. The anaerobic curing properties which starts at direct contact with the restoration (no more contact with oxygen) and the flexible consistency make PANAVIA™ F 2.0 a popular aid in daily practice. Even after releasing fluoride, the cement maintains its high mechanical strength due to the special surface coating technology of sodium fluoride.
INDICATIONS

- Cementation of metal crowns and bridges, inlays and onlays
- Cementation of porcelain crowns, inlays, onlays and veneers
- Cementation of composite resin crowns, inlays and onlays
- Cementation of adhesion bridges
- Cementation of endodontic cores and prefabricated posts
- Amalgam bonding

BENEFITS

- Reliable universal adhesive resin cement
- Anaerobic and dual-curing adhesive resin cement
- Cement system with a self-etching primer “ED Primer II” for the adhesion to tooth structure
- ALLOY PRIMER contained in the full kit provides ideal adhesion to precious metal
- Work without time pressure thanks to definable curing time (anaerobic or light-curing)
- Fluoride releasing, but maintaining high mechanical strength due to the special surface coating technology of sodium fluoride

CLEARFIL MAJESTY™ ES-2

Using composite resins for an esthetic restoration poses many challenges. One of these is easily detecting filled parts and margin lines between the composite resin and the natural tooth.

CLEARFIL MAJESTY™ ES-2 is designed to solve these esthetic issues in daily work. Thanks to the new brightness based shade-taking method, outstanding aesthetic restorations can be achieved. A wide range of shades – including four different transparency shades – and an easy-to-choose shade and layering method constitute a highly remarkable innovation.

CLEARFIL MAJESTY™ ES-2 consists of Classic shades for the single-shade technique and Premium shades for the dual-shade technique. The two systems can cover almost any restorative case in daily practice.

Kuraray Noritake Dental believes that brightness is the most important aspect in order to match a composite restoration with the natural teeth. With CLEARFIL MAJESTY™ ES-2 Kuraray has adopted the brightness based shade-taking method and the new Shade Guide for more precise shade choice.
**INDICATIONS**

- Direct restorations for all cavity classes in anterior and posterior teeth
- Direct veneers
- Correction of tooth position and shape (e.g. diastema closure, dwarfed tooth, etc.)
- Intraoral repairs of fractured restorations

**BENEFITS**

- New brightness approved by VITA™
- Marvelous color blending effect
- Wide range of shades, including four different transparency shades
- Intuitive shade choice and layering method

CLEARFIL MAJESTY™ ES Flow

CLEARFIL MAJESTY™ ES Flow is a universal flowable composite. Thanks to Kuraray Noritake Dental’s Silane technology millions of fillers now fit into the composite enabling beautiful and also durable restorations. The product’s aesthetic and physical properties make it ideal for both, anterior and posterior restorations.

The filler particles of CLEARFIL MAJESTY™ ES Flow have been designed to produce a high gloss and long-lasting gloss. CLEARFIL MAJESTY™ ES Flow is extremely easy and fast to polish in just seconds. Aesthetics are further enhanced by special light diffusion clusters that deliver outstanding color adaptation properties that blend seamlessly with the tooth structure.

CLEARFIL MAJESTY™ ES Flow universal flowable composite now comes with three levels of flowability adapted to your needs. Delivers easy, durable and aesthetic restorations.
INDICATIONS

- Direct restorations for all cavity classes, cervical lesions (e.g. root surface caries, V-shape defects), tooth wear and tooth erosion
- Cavity base/liner
- Corrections of tooth position and shape
- Intraoral repairs of fractured restorations
- Cementation of ceramic and composite inlays, onlays and veneers with less than 2 mm thickness

BENEFITS

- Superior gloss retention
- Easy to polish
- Durable restorations
- Wide range of indications
- 3 levels of flowability

CLEARFIL™ S² BOND PLUS Set
CLEARFIL MAJESTY™ ESTHETIC

CLEARFIL MAJESTY™ Esthetic is a light-curing, radiopaque composite resin, especially for anterior restorations. It contains an organic filler which offers high transparency and excellent light diffusion, a new fine filler with high radiopacity and polishability, and a high refractive index matrix (filler contents: 78 wt%, 66 vol%). CLEARFIL MAJESTY™ Esthetic exhibits light diffusion properties similar to natural tooth structure which makes it possible to use only one single matching shade per restoration. Clearfil Majesty™ Esthetic provides an outstanding and versatile shade matching for almost any restorative situation. The high refractive matrix also provides another essential benefit, a very minor transparency shift after light-curing. CLEARFIL MAJESTY™ Esthetic also has an easy handling consistency, with high polishability and low polymerization shrinkage (1.9 vol%), and is very easy to handle.
INDICATIONS

• Direct restorations for anterior and posterior teeth (Class I – V cavities)
• Direct veneers
• Correction of tooth position and tooth shape (e.g. diastema closure, dwarfed tooth, etc.)
• Intraoral repairs of fractured crowns/bridges

BENEFITS

• Excellent color matching with only 1 shade per restoration, especially for anterior restorations
• Versatile shade selection
• Light diffusion property similar to natural teeth
• Low polymerization shrinkage
• Easy handling consistency, not sticky
• High polishability

PRODUCT RANGE

Standard shades (syringes)

CLEARFIL MAJESTY™ Posterior

CLEARFIL MAJESTY™ Posterior is a light-curing, nano-superfilled, radiopaque restorative posterior composite resin composed of a nano and micro inorganic filler treated with a proprietary new surface coating technology. The new surface technology permits a larger quantity of nanofiller to be dispersed in the resin matrix, a matrix which consists of monomer and microfiller. The resulting resin matrix is reinforced with a filler loading of 92 wt% (82 vol%).

CLEARFIL MAJESTY™ Posterior has an improved high surface hardness close to that of human enamel (high wear resistance, but friendly against an antagonist tooth), high mechanical strength (compressive strength: 504 MPa, flexural strength: 177 MPa), high durability, high curing depth, low polymerization shrinkage (1.5 vol%) and a low thermal expansion coefficient. These features assure a reliable posterior restoration with better marginal adaptation and a restoration that will last. In spite of the extremely high filler loading, CLEARFIL MAJESTY™ Posterior also has an easy shapable consistency and the high refractive matrix also provides another essential benefit, a very minor transparency shift after light-curing.
INDICATIONS

- Direct restorations for anterior and posterior teeth (Class I – V cavities)
- Correction of tooth position and tooth shape (e.g. diastema closure, dwarfed tooth, etc.)
- Intraoral repairs of fractured crowns/bridges/composite resin

BENEFITS

- Highest filler loading (92 wt%, 82 vol%)
- High surface hardness, close to human enamel (high wear resistance), but friendly against an antagonist tooth
- High physical properties (mechanical strength, durability) and high curing depth
- Low polymerization shrinkage and low thermal expansion
- Better marginal adaptation even for a long time period
- Easy handling
- Versatile, simple, accurate shade selection for posterior restorations

BIBLIOGRAPHY

CLEARFIL MAJESTY™ Flow

CLEARFIL MAJESTY™ Flow is a flowable, superfilled, light-curing, radiopaque restorative composite resin with the filler particles treated with a proprietary new surface coating technology. The resulting resin matrix is reinforced with a high filler loading of 81 wt%, a loading similar to many universal composite resins. In addition to the high filler loading, CLEARFIL MAJESTY™ Flow has a low viscosity for good handling and easy placement. CLEARFIL MAJESTY™ Flow exhibits high mechanical properties (compressive strength: 329 MPa, flexural strength: 145 MPa), high wear resistance, high radiopacity (290 %Al) and low polymerization shrinkage. These features make it a very versatile product with multiple uses including as a universal composite resin (e.g. Class I, II).

CLEARFIL MAJESTY™ Flow has an excellent consistency (appropriate flowability, and is not runny or sticky). Equally significant is the new CLEARFIL MAJESTY™ Flow dispenser, a new syringe that provides nearly bubble free and controllable dispensing as well as dramatically easy handling.
INDICATIONS

- Direct restorations for anterior and posterior teeth (Class I - III, V cavities, cervical caries, root erosion)
- Cavity base / liner
- Intraoral repairs of fractured crowns/bridges/composite resin

BENEFITS

- High filler loading (81 wt%, 62 vol%) and low viscosity
- Low shrinkage and high physical properties (mechanical strength, wear resistance, durability)
- Multiple uses - including as a universal composite resin
- Excellent consistency (appropriate flowability, that is not runny or sticky)
- Easy handling (bubble free and controllable) with the new ergonomic syringe
- Versatile shade selection for multiple uses

BIBLIOGRAPHY

CLEARFIL™ AP-X

CLEARFIL™ AP-X is a light-curing, radiopaque universal composite resin which combines accurate color matching, best polishing qualities, and outstanding physical features. Thanks to these properties, it is suitable for both anterior and posterior tooth restorations. Its composition ensures optimum viscosity so that it can be polished easily and makes layering more simple.
INDICATIONS

- Class I, II, V restorations of posterior teeth
- Class III, IV, V restorations of anterior teeth
- Cervical cavities or defects involving root surfaces

BENEFITS

- Superior physical properties
- High resistance and long-lastingness
- Accurate color matching
- Radiopaque
- Easy handling
- Does not stick to instruments
- Available in syringes and PLTs
- Clinically proven since 1993

5 CONVINCING ADVANTAGES OF AP-X

1. High wear resistance
   CLEARFIL™ AP-X is a micro-hybrid composite heavy filled with fine barium glass particles in high density by 86 wt% (70 vol%). This is one of the reasons for the unusually high wear and fracture resistance performed by CLEARFIL™ AP-X. A truly convincing value for durable posterior restorations.

2. Excellent polishability
   The high number of fine filler particles (smallest 0.04 µm) provides excellent polishability. As an effect, esthetic results can be achieved, perfectly suited for challenging anterior restorations.

3. Low polymerization shrinkage
   In addition, the high dense filler content is one of the reasons for a very low polymerization shrinkage of 1.9% which reduces stress forces against cavity walls dramatically. As an effect, the risk of post-operative sensitivities and secondary caries due to marginal leakage is limited.

4. Visible radiopacity
   The absence of marginal gaps can easily be followed-up as the material offers excellent radiopacity for x-ray evaluations due to its high percentage in barium glass particles.

- #1731-E2 XL  20 tips
- #935-EU Shade guide

5. Easy handling
   With a special non-sticky formula, CLEARFIL™ AP-X does not stick to any instruments or matrix. On the one hand the material offers convenient adaptation towards additional composite layers for anterior restorations. On the other hand the consistency of CLEARFIL™ AP-X is more than adequate to allow precise shaping in posterior areas. Convenient PLTs improve the application process and ensure hygienic treatment.
CLEARFIL™ PHOTO BRIGHT

CLEARFIL™ PHOTO BRIGHT is an esthetic anterior composite with proven Kuraray technology, excellent handling properties and a beautiful selection of colors. Excellent mechanical and physical properties are essential for the durability and esthetics of a restoration. The balanced filler composition and excellent bonding with the resin matrix make CLEARFIL™ PHOTO BRIGHT unique, resulting in a natural looking restoration, excellent polishability and a strong and long-lasting restoration which also preserves a long-term brilliance. The addition of fluorescence make CLEARFIL™ PHOTO BRIGHT complete.
INDICATIONS

- Anterior restorations (classes III, IV)
- Class V restorations (cervical caries, root erosion, wedge-shaped defects)

BENEFITS

- Broad range of color shades
- Simple use
- Does not stick to instruments
- Excellent physical and mechanical properties
- Ideal for the preparation of composite veneers
- Fluorescence

CLEARFIL™ PHOTO POSTERIOR

CLEARFIL™ PHOTO POSTERIOR is a light-curing radio-paque composite for restorations in the posterior area. It stands out for its excellent processing, exceptional adhesion, superior marginal sealing, and high resistance to wear. A selection of six color shades enables the construction of esthetic and durable restorations. The report by Prati et al. (University Bologna) described superior results for CLEARFIL™ PHOTO POSTERIOR.
INDICATIONS

- Posterior restorations (classes I, II and V)

BENEFITS

- High strength and durability
- High wear resistance
- Radiopaque
- Easy handling
- Smoothly polishable surface

CLEARFIL™ DC CORE PLUS

CLEARFIL™ DC CORE PLUS is a dual-cure (light-cure with self-curing property) two-component core build-up material supplied in an automix delivery system for esthetic and reliable restorations. The self-curing property of this new core material is the perfect solution for those areas of the root canal which are not accessible for light. For all other areas the curing time can be sped up by light-curing.

For core build-up restorations it is essential to reduce the risk of contamination by a short and easy application procedure. CLEARFIL™ DC CORE PLUS is designed for a stress-less application thanks to the simplified procedure, optimal paste handling, and a working time of only 3 minutes. For all steps, applying to the root canal and the core build-up, you can easily use the same mixing tip.
INDICATIONS

- Core build-up restorations of vital and non-vital tooth

BENEFITS

- Minimal risk of debonding and root fracture thanks to proper elastic modulus similar to dentin
- Easy-to-use, stress-less clinical procedure
- Dual-curing composite (light-curing with self-curing property)
- Direct application with the Automix syringe
- Radiopaque

BIBLIOGRAPHY

CLEARFIL™ PHOTO CORE

CLEARFIL™ PHOTO CORE is a light-curing core build-up composite for the most demanding esthetic requirements. The material has a balanced filler share (83 wt%, 68 vol%) which has been specifically selected for the construction of dependable core build-ups. The material cures completely to a depth of 7 mm in just 40 seconds which is unique. Thus clinicians are able to simplify their procedure by eliminating copper bands and matrix bands and incremental layering, especially when using CORE FORMS. CLEARFIL™ PHOTO CORE cuts like dentin after curing, is radiopaque and does not stick to instruments during application thanks to its special formula. With a compressive strength of 334 MPa, CLEARFIL™ PHOTO CORE is ideal for small or large CORE FORMS on vital or devital teeth.
INDICATIONS

- Restorations where a light-curing composite for core build-up is required

BENEFITS

- Actual polymerization depth of 7 mm
- No increments needed with Core Forms
- Esthetic transparent shade
- Cutting like dentin
- Easy handling
- Radiopaque
- Non stick formulation

CLEARFIL™ CORE NEW BOND

CLEARFIL™ CORE is a self-curing composite core build up material (filler contents: 78 wt %, 63 vol %) that has a unique shade and high compressive strength. It is especially suitable for the construction of immediate core build-ups. The contrasting esthetically sound color, the good adhesive properties, the characteristic setting qualities and hardness, which can be compared to dentin, make it possible to build a dependable substructure very simply. CLEARFIL™ CORE is suitable for the construction of both vital and non-vital teeth.
INDICATIONS

- Core build-up of vital or non-vital teeth

BENEFITS

- Cuts like dentin
- Economical use
- Simple handling
- Radiopaque
- Predictable curing
- Neutral color shade

KATANA™ ZIRCONIA BLOCK

KATANA™ Zirconia Block is the innovative multi-layered zirconia block that makes it possible to fabricate full zirconia restorations at chairside in approx. 35 minutes - the ultimate collaboration of advanced materials and technology.

The multi-layered KATANA™ Zirconia Block consists of four layers zirconia in graduated shades allowing the chairside fabrication of natural-tooth colored restorations. Eliminating a time-consuming and complex situation of staining the restoration.

With its superb mechanical properties and aesthetic qualities that mimics natural teeth, KATANA™ Zirconia Block brings in the best of both worlds. Highly translucent and great flexural strength. This results in better mechanical properties than lithium disilicate glass ceramics and exceptional aesthetics.

Now also available KATANA™ Zirconia Block for bridge for up to 3-unit restorations.
INDICATIONS

- Anterior crown
- Posterior crown
- Veneer
- Inlay
- Onlay

BENEFITS

- Delivers better mechanical properties than lithium disilicate glass ceramics
- Aesthetic quality mimics natural teeth through enhanced translucency
- Single-visit chairside restorations. 15 min. Milling + 30 min. Sintering
- Bond with PANAVIA™ V5 for an excellent adhesion to zirconia

**KATANA™ AVENCIA™ BLOCK**

KATANA™ AVENCIA™ Block is a new type of hybrid ceramic developed bringing together the organic/inorganic technology and experience that we have gained through long years developing and working with restorative materials.

KATANA™ AVENCIA™ Block is produced using our unique manufacturing method. The nano-sized fillers are densely compressed into a block, which is then uniformly impregnated with resin monomer. The resin is then polymerized by heat. This new type of hybrid ceramic block has great mechanical strength to withstand occlusal pressure, as well as excellent gloss retention.
INDICATIONS

- Inlay, onlay
- Pre-molar crown
- Anterior crown
- Posterior crown

BENEFITS

- Homogeneous nano-structure
- Excellent mechanical properties
- Superior polishability
- Wear resistant

CARIES DETECTOR

CARIES DETECTOR is an excellent means of detecting caries and plays a major role in maintaining and preserving teeth. It provides support for the excavation of the demineralized outer tooth hard structure affected by the caries, making it possible to remove the caries as completely as possible. At the same time, it makes sure that as little healthy dentin which can be remineralized is removed as possible, secures pulp vitality, and preserves the healthy tooth structure. Numerous studies have shown that it is not possible to distinguish, either optically or mechanically using the sensor test, between irreversibly diseased dentin and healthy dentin which can be remineralized. Using CARIES DETECTOR, you can confidently proceed with the excavation because only the irreversibly diseased dentin is stained red.
INDICATIONS

- Disclosing caries dentin in cavity preparations

BENEFITS

- Fast and easy use
- Free from side effects
- Preserves healthy tooth hard substance
- Stains tooth hard structure red changed by caries during all preparatory measures in the cavities
- Does not stain remineralizable caries-affected dentin

TEETHMATE™ DESENSITIZER

TEETHMATE™ DESENSITIZER is the first desensitizer that offers a real solution for sensitivity. Kuraray Noritake Dental designed this product to create the human body’s hardest mineral, hydroxyapatite (HAp). So from now on, sensitivity can be treated with confidence to close dentinal tubules and enamel cracks.

TEETHMATE™ DESENSITIZER can be used to close exposed or prepared dentin and also before and after bleaching. TEETHMATE™ DESENSITIZER can be used in combination with the favorite adhesive or cement as well. This is a brand new product on the European market, and received great appreciation among dentists already in Japan.

Various studies show that the application of TEETHMATE™ DESENSITIZER is effective and occludes the dentinal tubules reducing the dentinal fluid movement and the consequent hypersensitivity. This product is very easy to apply; just mix the powder and the liquid for 15 seconds, apply for 30 seconds on the sensitive area (one or more teeth) and then rinse with a mild water flow.
INDICATIONS

- Treatment of dentin exposed by toothbrush abrasion, gingival recession, periodontal disease and/or acid erosion
- Treatment of dentin after mechanical tooth cleaning, scaling and/or root planing
- Treatment of the tooth surface before and after bleaching
- Treatment of prepared dentin for fillings and/or prosthetic restorations

BENEFITS

- First desensitizer that creates hydroxyapatite
- Natural, tissue friendly and neutral taste
- Easy to apply
- Invisible and durable

TEETHMATE™ F-1

TEETHMATE™ F-1 is a fluoride-releasing, light-curing pit and fissure sealant material with strong adhesive properties. It is offered to simplify the “flow control” with a newly developed pin application system. The stable copolymer which releases fluoride is one of Kuraray’s own inventions. TEETHMATE™ F-1 is an unfilled composite of low viscosity that penetrates deep into pits and fissures so that the impairment of the antagonist is kept to a minimum. The balanced product formula of TEETHMATE™ F-1 includes the adhesive monomer MDP, which is also used in the resin cement PANAVIA™ F 2.0 and the bonding system CLEARFIL™ SE BOND.

The special properties of the monomer MDP give TEETHMATE™ F-1 a genuine chemical adhesion and better retention on the etched tooth enamel.
INDICATIONS

• Pit and fissure sealant

BENEFITS

• High bond strength to enamel
• Real chemical bond thanks to MDP monomer
• Long-lasting fluoride release with molecular stability
• Easy handling
• Convenient flow control

The form and flexibility of the enclosed applicator nozzles simplify access and ensure simple handling and good control of the liquid. The remainder of the composite on the specially formed applicator can be easily read through a transparent window.

1) Mix with an adhesive (e.g. CLEARFIL™ UNIVERSAL BOND QUICK) for combination with dual- or selfcuring composites.
CLEARFIL™ CERAMIC PRIMER PLUS

The all-new CLEARFIL™ CERAMIC PRIMER PLUS is the universal prosthetic primer for almost all prosthetic surfaces. It durably bonds to ceramics (lithium disilicate, zirconia), hybrid ceramics (e.g. ESTENIA™ C&B), composite resins and metals.

The original MDP monomer bonds to metals and metal-oxides such as zirconia. Silane coupling agent γ MPS guarantees a strong adhesion to composites, glass-ceramics and hybrid ceramics (e.g. ESTENIA™ C&B). This perfect mixture of ingredients will give you long lasting adhesion to virtually all dental materials.
INDICATIONS

- Surface treatment of prosthetic restorations made of ceramic, hybrid ceramics, composite resin or metal
- Intraoral repairs of fractured restorations made of ceramics, hybrid ceramics, composite resin or metal

BENEFITS

- Pretreatment for restorations made of ceramic, hybrid ceramics, composite resin or metal.
- The original MDP and silane coupling agent γ-MPS guarantee a strong adhesion.
- Simple use (apply & dry)

PRODUCT RANGE

#3637-EU
Primer: 4 ml

PRODUCT RECOMMENDATIONS

**PANAVIA™ V5 Standard Kit**
- #3601-EU Universal (A2)
- #3602-EU Clear
- Content 1 Syringe 4.6 ml, 1 Tooth Primer
- 2 ml, 1 CLEARFIL™ Ceramic Primer Plus
- 2 ml, 1 K-ETCHANT Syringe 3 ml, 15 pcs. Mixing tip, 5 pcs. Endo tip, 50 pcs.
- Applicator brush (fine <silver:>)
- 1 Mixing dish, 20 pcs. Needle tip

- #3613-EU Brown (A4)
- #3614-EU White
- #3615-EU Opaque
- Content 1 Syringe 4.6 ml, 20 pcs. Mixing tip
ALLOY PRIMER

ALLOY PRIMER is a pretreatment agent for conditioning metal and is used to secure the adhesive capability of resins and acrylic ester to gold, titanium, and other dental alloys. Tin-plating of the metal surfaces is no longer required because the ALLOY PRIMER creates excellent bond strength to the metal surface. The chemical bond thus created provides ideal adhesion of composite resins to all metal alloys so that the ALLOY PRIMER can also be used during the repair of fractured restorative materials in the dentist's office and the laboratory.

ALLOY PRIMER is simple and economical to use: apply a thin coating to the roughened or sand-blasted and cleaned metal surface and allow it to react for 5 seconds. Continue with the adhesion procedure as usual.
INDICATIONS

- Adhesion of metal inlays, onlays, crowns and bridges
- Adhesion of metal cast posts
- Repair of fractured resin-based veneers and ceramic-fused metal crowns and bridges
- Fabrication of removable dentures with metal base, clasp or attachment
- Repair of dentures

BENEFITS

- Multiple indications
- Intra- and extra-oral use
- Increases bond strength to precious metal alloy
- Replaces the procedure of tin-plating metals
- Economical use

PRODUCT RANGE

#064-EU
1 bottle: 5 ml

BIBLIOGRAPHY

K-ETCHANT SYRINGE

The all-new K-ETCHANT Syringe lets you fully control your application.

Thanks to its thixotropic characteristics, you easily place the etchant. And it just stays where you want.

The new small nozzle gives you perfect control to pin point your application.

Etching was never more precise.
INDICATIONS

- Etching of enamel and dentin
- Cleaning of dental restorative materials

BENEFITS

- Easy and pin point application with 0,5 mm nozzle
- Optimized consistency for safe etching procedure
- Thixotropic properties give you full control over the etchant
- No air bubbles

PRODUCT RANGE

#3252-EU
K-ETCHANT Syringe
Content: 2 K-ETCHANT Syringes (3 ml), 40 needle tips

#3253-EU
K-ETCHANT Syringe Needle tips
Content: 20 needle tips

PRODUCT RECOMMENDATIONS

#3571-EU
CLEARFIL™ Universal Bond Quick Bottle Standard Kit
Content: 1 Bottle (5 ml), 1 K-ETCHANT Syringe (3 ml), 1 dispensing dish, 1 light-blocking plate, 50 applicator brushes (fine), 20 needle tips

#1970-EU
CLEARFIL™ SE BOND Kit
Content: Bond (5 ml), Primer (6 ml), 100 applicator brushes (fine), 1 mixing dish, 1 light blocking plate, 1 outer case
K-ETCHANT GEL

K-ETCHANT GEL is a thixotropic etching gel which is used to etch tooth enamel, dentin, ceramics, hybrid ceramics and cured composites for adhesive restorations. Its special feature: when you shake the bottle, the content becomes liquid, simplifying the application of K-ETCHANT GEL. When it comes into contact with oxygen, it reverts to the gel state, ensuring that only those areas which are supposed to be treated are etched.
**INDICATIONS**

- Etching of enamel, especially uncut enamel, and dentin
- Cleaning of the ceramic, hybrid ceramic, composite resin or metal restoration surface
- Activation of the surface of silica-based ceramic or composite resin restorations

**BENEFITS**

- Thixotropic properties provide controlled application
- 40% phosphoric acid

**PRODUCT RANGE**

#013-EU
1 bottle: 6 ml

**APPLICATION**

Etching of tooth enamel with K-ETCHANT GEL when using the acid etching technique.

Etching all-ceramic crowns with K-ETCHANT GEL before preparation of a silane layer.

Cleaning of ceramic inlays with K-ETCHANT GEL before the adhesive cementing.

Etching of veneers with K-ETCHANT GEL before creating a silane layer.

Cleaning of ceramic and metal with K-ETCHANT GEL during intraoral repair of a veneer, before contact with an adhesive (e.g. REPAIR KIT).
CLEARFIL™ DC Activator

CLEARFIL™ DC Activator activates the dual-curing mechanism of the CLEARFIL™ Bonding System (e.g. CLEARFIL™ SE BOND 2, CLEARFIL™ SE Protect or CLEARFIL™ UNIVERSAL BOND QUICK).

When mixed with the bond from these systems they become dual-cure. The results are truly universal adhesives with low film-thickness & high self-cure bond strengths.

This unique combination provides a simple, universal solution for all of your indirect & core build-up restorations.
INDICATIONS

- Core build-up in conjunction with self- or dual- cured core build-up materials
- Cementation in conjunction with self- or dual- cured composite resin cements

BENEFITS

- Works with CLEARFIL™ Bonding system
- Low film thickness for indirect restorations
- Strong self-cure bond strengths
- Touch-cure effect
- Core build-up in combination with self- or dual-cured core build-up materials
- Cementation in combination with self- or dual-cured composite resin cements

CLEARFIL™ Universal Bond Quick Bottle Standard Kit
Content: 1 Bottle (5 ml), 1 K-Etchant Syringe (3 ml), 1 dispensing dish, 1 light-blocking plate, 50 applicator rushes (fine), 20 needle tips

PRODUCT RANGE

#3250-EU
CLEARFIL™ DC Activator
1 bottle (4 ml)
CLEARFIL™ PORCELAIN BOND ACTIVATOR

CLEARFIL™ PORCELAIN BOND ACTIVATOR is a product used for the creation of a silane layer which in combination with CLEARFIL™ S3 BOND PLUS, the primer of CLEARFIL™ SE BOND, the primer of CLEARFIL™ SE PROTECT, the primers of CLEARFIL™ LINER BOND 2V, or the total-etch adhesives CLEARFIL™ PHOTO BOND and CLEARFIL™ NEW BOND, guarantees high bond strength. The fresh mixture can be applied directly onto the surface of restorations made of ceramic, hybrid ceramic or composite resin to improve the bond strength, then start adhesion procedure as usual. The adhesion system is convenient, uncomplicated, economical and time-saving.
INDICATIONS

- Surface treatment of ceramics, hybrid ceramics or composite resin after mixing the adhesives or primer (e.g. CLEARFIL™ S3 BOND, the primer of CLEARFIL™ SE BOND etc.)
- Intra-oral repairs of fractured crowns/bridges made of ceramic, hybrid ceramic or composite resin

BENEFITS

- To create a silane adhesive layer
- Fresh mixing with CLEARFIL™ S3 BOND, the primer of CLEARFIL™ SE BOND, the primer of CLEARFIL™ SE PROTECT, the primers of CLEARFIL™ LINER BOND 2V, CLEARFIL™ PHOTO BOND or CLEARFIL™ NEW BOND, guarantees high bond strength
- Pretreatment for restorations made of ceramic or composite resin
- Suitable for intra- and extra-oral use
- Economical use

APPLICATION

Activate silane: mix the primer of CLEARFIL™ SE BOND and PORCELAIN BOND ACTIVATOR in a ratio of 1:1 in a mixing dish.

Apply silane to the workpiece and allow to react for 5 sec.

PRODUCT RANGE

KATANA™ CLEANER

REMOVE CONTAMINATION TO OPTIMISE YOUR ADHESIVE PROCEDURES

KATANA™ Cleaner is a universal cleaning solution suitable for all adhesive procedures.

During trial fitting your restoration might become contaminated with proteins reducing the bond strength. KATANA™ Cleaner has a high cleaning effect due to the surface active characteristic of MDP Salt.

In contrast to other cleaners, KATANA™ Cleaner has a pH value of 4.51 which allows usage not only extra-orally but also intra-orally. It is the easy way to optimize your bondings including cementation procedures.

KATANA™ Cleaner is easy and fast to use. Rub in, rinse and dry. That’s all you need to do to optimise your adhesive procedure. Unlike other cleaners that require longer rubbing time, and are limited to extra-oral use only, KATANA™ Cleaner only requires 10 seconds and can be used both extra and intra-orally.

**INDICATIONS**

For the purpose of cleaning the tooth structure and restorations, KATANA™ Cleaner is indicated for the following uses:

1. Cleaning of contaminated glass ceramic, zirconia, resin and metal restorations and fiber posts.
2. Cleaning of (contaminated) prepared tooth structure (cavity, root canal and tooth abutment), and implant abutment.

**BENEFITS**

- For all restorative procedures
- Intra and extra-oral use
- High cleaning effect

**PRODUCT RANGE**

- #3970-EU KATANA™ Cleaner (4.0ml)
- #3971-EU KATANA™ Cleaner Trial (1.0ml)

  BOND.
CLEARFIL™ REPAIR

CLEARFIL™ REPAIR is a universal adhesive system which can be used in many ways and which enables the repair of all tooth-related fractures within only minutes. The system has been specifically developed for all direct bonding procedures in dental practice, irrespective of whether the materials being treated are tooth structure, ceramic, hybrid ceramics, metal, or composite. The kit contains five innovative components of high quality: the tried and proven self-etching bonding system CLEARFIL™ SE BOND, the metal primer ALLOY PRIMER which makes additional tin-plating superfluous, the silane coupling agent CLEARFIL™ PORCELAIN BOND ACTIVATOR, the CLEARFIL™ ST OPAQUER, the etching gel K-ETCHANT GEL with 40% phosphoric acid, and accessories.
INDICATIONS

• Intra-oral repairs of fractured ceramic or composite veneers/bridges
• Intraoral repairs of fractured all-ceramics restorations
• Intraoral repairs of fractured ceramic and composite inlays/onlays and/or exposed root surfaces

BENEFITS

• Multifunctional Kit
• High bond strength to ceramic, hybrid ceramic and composite resin restorations
• Enables direct repairs in a few minutes
• Includes self-etching CLEARFIL™ SE BOND
• Contains the adhesion monomer MDP

PRODUCT RANGE

#1971-EU
Kit
Content: 1 CLEARFIL™ SE BOND Primer: 6 ml,
1 CLEARFIL™ SE BOND: 5 ml
1 ALLOY PRIMER: 1 ml
1 CLEARFIL™ PORCELAIN BOND ACTIVATOR: 4 ml
1 K-ETCHANT GEL: 6 ml
1 CLEARFIL™ ST OPAQUER (US): 4.0 g; Accessories: 1 mixing dish, 1 light blocking plate, 2 x 50 disposable brush tips, 1 brush tip handle, outer case
CLEARFIL™ TWIST DIA

There is only a little number of polishing systems existing which are that flexible, easy to use and efficient as this new polishing system. Besides the special shape, the employed pure diamond grains lead to high shine surfaces combined with short application times. Additionally, the CLEARFIL™ Twist DIA is applied in only two steps that are adapted to each other for outstanding polishing results. And the best comes for the last – the polishing system is suitable for each composite surface – even the polishing of the occlusion is considerably simplified! The constant release of new diamond grains gives you a great result several treatments. Just try it – and you’ll be surprised how simple your polishing procedure can actually be!
**INDICATIONS**

- Indicated for all composite surfaces

**BENEFITS**

- Easy polishing procedure thanks to just two polishers
- Pre-polisher to smooth the surface
- High shine polisher to create natural gloss
- Reusable thanks to constant release of diamond grains
- 100 % diamond grains inside – no substitutes or cheaper abrasive particles

**PRODUCT RANGE**

14 mm
- #1201-IP Introductory Kit (3 pre-polishing / 3 high-shine polishing)
- #1202-IP Refill Pre-Polisher (10 pcs)

KATANA™ ZIRCONIA TWIST DIA

Polishing of high-gloss zirconia oxide in three steps. The innovative shape with the flexible polishing lamellae creates a natural gloss on all zirconia oxide restorations. No matter if the surfaces are level, convex or concave, the diamond-impregnated lamellae polish them at a high-gloss level. In addition, KATANA™ Zirconia TWIST DIA is autoclavable.

KATANA™ Zirconia TWIST DIA is available in three coarseness grades: coarse, medium and fine. It can only be supplied with a corner connection (RA). We advise you to start polishing with the coarse grade, followed by medium and fine to obtain the ultimate high-gloss result.

Recommended speed of rotation: 7,000 - 10,000 rpm for Coarse/Medium/Fine.
Maximum speed of rotation: 20,000 rpm
INDICATIONS

· Polishing surface of zirconia restorations

BENEFITS

· Flexible polishing twist for refining all types of tooth surfaces
· Highly suitable for occlusions
· Modellation of zirconia restoration is maintained
· Sterilizable and reusable
· Economic efficiency due to high durability and reusability

CLEARFIL™ DISPENSER

CLEARFIL™ DISPENSER is designed to be used with Automix syringe products to facilitate easy dispensing and precise placement of the Automix paste.
INDICATIONS

- To facilitate easy, precise dispensing of Automix syringe products

BENEFITS

- Easy & quick dispensing
- Very tolerant regarding clinical technique
- More convenience for direct application into root canal in combination with Endo tip

PRODUCT RECOMMENDATIONS

#4212-EU
PANAVIA™ SA Cement Universal Automix (Universal (A2))

#4213-EU

INSTRUCTIONS

Please read the instruction for use of this dispenser before using.

1. Prepare the dispenser to receive the syringe by pushing the release lever located on the back of the dispenser.

2. Remove the syringe plunger by pulling it back while holding the syringe.

3. The syringe fits into the dispenser only in one direction. Orient the syringe to match the slot on the front of the dispenser. Slide the syringe into the dispenser until a click is heard.

4. Attach Mixing tip or Endo tip.

5. Dispense.
